double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. This library was constructed from the same fetus as the fetal heart library, Soares
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AI185924 477 bp mRNA EST 29-OCT-1998 qe50c05.x1 Soares_fetal_lung_NbHL19W Homo sapiens cDNA clone IMAGE:1742408 3' similar to TR:Q16354 Q16354 PROLACTIN RECEPTOR ;,

Submitted (25-M06-1998) Department of Chemistry And Blochemistry,
The University of Oklahoma, 620 Parrington Oval, Room 208, Norman,
Ok 73019, USA
On May 29, 1999 this sequence version replaced g1:4510435.

* NOTE: This is a "working draft" sequence. It currently
* consists of 7 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be preserved
* by the finished sequence as soon as it is available and
the accession number will be preserved
* by the finished sequence as soon as it is available and
the accession number will be preserved
* 2246: contig of 2246 bp in length
* 5237 6162: contig of 17789 bp in length
* 6233 24021: contig of 17789 bp in length
* 64426 73433: contig of 2638 bp in length
* 46426 73433: contig of 26938 bp in length
* 73503: gap of unknown length
* 73503: gap of unknown length
* 73504: Gap of unknown length
* 73507: Gap of unknown length

Use of an ordered cosmid library to deduce the genomic organization
of Mycobacterium leprae
Mol. Microbiol. 7 (2), 197-206 (1993)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    are also included but some to the codes is given for each CDS.

In codoss is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. All CDS over 100 codons have been analysed. Gene prediction is based on positional base preference in codons especially where there is an increase in the observed/expected third position G + C. CAUTION:
                                                                                                                                                                ALO49478.1 GI:4539121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        requests: clonerequest@sanger.ac.uk
On Jan 16, 1999 this sequence version replaced gi:3892846.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the true left end of clone 150C2 (ALO22318) is at 111647 in this sequence. The true right end of clone 779B17 (ALO21806) is at 50467
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IMPORTANT: This sequence is not the entire insert of clone 327J16. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                        ALO08583.1 GI:4160195
HTG; CHROMODOX; CpG 1sland; Neuronal Pentraxin Receptor; outer arm
Dynein light chain 4.
                                                                                                                                                                                                              HS327J16 111746 bp DNA PRI 15-JAN-1999 Human DNA sequence from clone 327J16 on chromosome 22ql2.3-13.2. Contains three novel genes: the human ortholog of mouse outer arm Dynein light chain 4, the human ortholog of rat Neuronal Pentraxin Receptor and a novel member of of the CHROMODOX protein genes family. Contains ESTs, STSs, a GSS and putative CpG islands,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          327216 is from the library RPCI3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. The length in codons is given for each CDS.
Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT
```

```
correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream librosome binding site sequence (optimally 5.13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If the sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid 664 lies between D31 and D63 in the AseI-D genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         translation = "IAGRRVCRNEPKHVFHVTYTPPKKEGVCDVCGGELYQRDDDSEE

                                                                                                                                                                                                                                                                                                                                                                                              During sequence assembly data is compared from overlapping clones. Merca differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences submission or responding to the overlapping clone, as we submit sequences with The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Em:, EMBL; Sw., SWISSPROT; Tr:, TREMBL
This sequence is the entire insert of clone 333A15. This sequence
has been finished according to sequence map criteria as follows. An
attempt is made to resolve all sequencing problems, such as
compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was generated from part of bacterial clone contigs of

Claim 5; Page 84-87; 187pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6.

The haemopoletin receptor (HR) and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. cor cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                      Novel hamopoletin receptor NR6.2 gene. Claim 4; Page 77-81; 182pp; English.
The haemopotetin receptor (HR) NR6.1 is a form of the novel HR NR6.
The haemopotetin receptor (HR) MR6.1 is a form of the novel HR NR6.
Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                      NRG is a novel haemopoietin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel hammopoletin receptor NR6.1 gene.

Treat, mover and encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating cell proliferation or I munue response, for treating cancer and auto:immune.disease Claim 1; pages 25-26; 38pp; English.

This is the nucleotide sequence encoding the murine U4 protein from the haematopoietin receptor superfamily, used in the method of the cinvention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 72-75; 55pp; English.

Disclosure; Page 72-75; 55pp; English.

The present sequence encodes a protein designated Zeytor5, which is a cytokinin-like receptor. Soluble Zeytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart of cardiotrophin-1 on cardiac pathologies, so preventing heart blood, and to discover other possible Zeytor5 ligands. A probe comprising Zeytor5 DNA or RNA can be used to determine the presence and integrity of the Zeytor5 gene on chromosome 19. Antibodies and the cardiotrophia antibody could be used to purify Zeytor5 and therapeutically to modify Zeytor5 ligand effects.

Q78165/R63461 are the nucleotide sequence and deduced AA sequence of BHV 1 UL49 homologue gene. The complete DNA sequence between the Namologue gene and dUTPase gene (UL50 homologue) gene are presented, putative G-C box, TATA box and polyA signal sequence are indicated in FT. The boundaries of UL50, UL 49.5 and UL48 ORFs surrounding the UL 49 homologue gene are also indicated. Sequence complete the complete of UL50, UL 49.5 and UL48 ORFs surrounding the UL 49 homologue gene are also indicated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 claim 24, Page 56-66, 93pp; English.

Claim 24, Page 56-66, 93pp; English.

Claim 24, Page 56-66, 93pp; English.

MII and MT2 proteins were isolated from malignant cells essentially following the method of Penman and Fey, described in US Pat. Nos. 4, 200 and 4, 885,236. DNA sequences encoding these proteins were cloned by probing expression libraries using monoclonal antibodies raised against the isolated INM proteins. The genetic sequence coording MT2 has been disclosed by Yang et al. 1992, J. Cell Biol. 116:1395-1408, and is referred to by them as 'NuMA'. The nucleotide sequence encoding MT1 has not been described previously. Both the MT2 proteins are distributed throughout the nucleus (with the exception of the nucleolus) in non-mitotic cells, and localise to the exception of the nucleolus) in non-mitotic cells, and localise cell type in a sample which uses a mRNA complementary to 054841 is claimed.
                                                                                                                                                           craim 15; Page 45-47; Sipp; English.

C A genomic DNA molecule (164785) comprises the promoter region of the human oxygen regulated protein ORP 150 gene. It was obtd. from c human placenta genomic library using probes based on human and c rat ORP 150 cDNA clones (see also 764783 and 764784). The sequence c covers the 5' untranslated region to just before the translation c initiation codon in exon 2. It is able to promote transcription in cells when exposed to hypoxia, and will be useful for analysis of the corresponding human gene, partic. for facilitating its appln. C to the treatment of ischaemia diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                    The sequence

The sequences given in T77782-83 encode fusion proteins which contain Twa sequences given in T77782-83 encode fusion proteins were used in NuMA (nuclear mitotic apparatus).

The fusion proteins were used in the fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30).

W21729-30). Compounds which interfere with the interaction of NuMA by traised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for detect NIP (or their complexes) and to block their activity for which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). The nucleotide and deduced as sequences of human transducin-like enhancer of split proteins TLE-1 (062175, R51476), TLE-2 (062176, R51477), TLE-3 (062177, R51478) and TLE-4 (062178, R51479) were determined. The as sequences were compared with that of Drosophila E(spl)m9/10 protein (R51481). Comparison of the WD-40 domains of these proteins defined the consensus residues shown in R51480. The antigen, human c-myc, human p53, human A-myb and dorsal proteins with respect to nuclear localization site, and casein-kinase II and cdc2-kinase phosphorylation sites (sequences R51482-96). TLE can be
                    associated multi-protein complexes, chimeric proteins,
antibodies, nucleic acid, etc., involved in nuclear-cytoplasmic
protein transport

```

Mycobacterium tuberculosis genomic DNA fragment (I). Tuberculosis; mycobacteria; infection; diagnosis; antimycobacterial; antiblotic; vaccine; ss.

Mycobacterium tuberculosis WO9741252-A2.

T93610 standard; DNA; 3946 BP 27-APR-1998 (first entry) 06-NOV-1997. 18-APR-1997; E01973. 18-APR-1996; DE-017184. (GBPB) GBF GES BIOTECH FORSCHUNG GMBH. ESPITIA C, Honlsch C, Moreno C, Singh M;

WPI; 97-549750/50 P-PSDB; W31852-55

us-09-037-657-30.rng

```
New Particle of Materials of RNA derived from M. tuberculosis - used for diagnosis of mycobacterial infections, monitoring used for diagnosis of mycobacterial infections, monitoring used for diagnosis of mycobacterial infections, monitoring used for diagnosis of mycobacterial agents

T vectination and development of anti-mycobacterial agents
Claim 1; Fig 9; 55pp; English.

Claim 1; Fig 9; 55pp; English.

New claimed DNA (A) has one of 3 isolated Mycobacterium

Cuberculosis DNA sequences of 3946 bp (I) (T93610), 2653 bp (VI)

Claim 1; Fig 9; 55pp; English.

Claim 2; Fig 9; 55pp; English.

Claim 2; Fig 9; 55pp; English.

Claim 2; Fig 9; 55pp; English.

Claim 4; Fig 9; 55pp; English.

Cloim 4; Fig 9; 55pp; English.

Cloim 5; Fig 9; 55pp; English.

Cloim 6; My and proteins encoded by (A). To isolate probes of a protein cloim 2; Fig 9; Fig 9; Fig 9; Fig 9; Fig 9;

Cloim 6; Fig 9; 55pp; English.

Cloim 6; Fig 9; 
Cloim 6; Fig 9; 
Cloim 6; Fig 9;

                                                     r93610,
RESULT
                                                                                                                                             naturally produce claving.

Disclosure; Fig.2; 41pp; English.

A library of S. claviligerus NRRL 5741 genomic DNA fragments (15-22 kb) constructed in cosmid pLAFR3 was screened for the cla gene using a probe based on a partial N-terminal sequence from the CLA enzyme. Isolated clone KGil included a lSkb fragment having the sequence given in Q91580 that included the cla gene (ORF4).
                                                                                                                                                                                                                           13-NoV-1995 (first entry)
S. clavuliniderus cla gene region.
Clavulinic acid; clavulinate; antibiotic; beta-lactamase-inhibitor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Aldoo KA, Jensen SE, Paradkar AS;

T 3'), on equal amounts of mRNA from 2 13.5dpc and 2
14.5dpc embryos [total RNA provided by Minoru Ko, Wayne
State Uniu., from 2 ]; double-stranded cDNA was ligated to
Eco RI adaptors (Pharmacia), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT7T3 vector. Library went through one round of
DTMAILSTATION, and was constructed by Bento Soares and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Anote—"Vector: pTTT3D-Pec (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco Ri; The UI-R-GO library is a normalized library constructed from a mixture of rat tissues (nodose ganglia, dorsal root ganglia, and trigeminal ganglia). The tag is a string of nucleotides present between the Not I site and the oligo-dT track. The library was constructed as described by Bonaldo, Lennon and Soares, Genome Research 6:
                                                                                                                                                                                                                                                                                                                                                                         Raftus norvegicus
